

EXPERIMENT 6

NAME:SOAMESHWARAN D ROLL:240701520

RAD MODEL WITH AXURE RP

AIM

To design and develop an interactive user interface for a Campus Opportunity Discovery application using the Rapid Application Development (RAD) model and Axure RP tool.

INTRODUCTION

Rapid Application Development (RAD) is a software development methodology that focuses on quick design and prototyping with continuous user feedback. It emphasizes faster development cycles and iterative improvements.

In this experiment, a mobile application named **Campus Connect** is designed. The application helps students discover and apply for campus opportunities such as internships, volunteering, and events. The UI is developed using Axure RP, focusing on usability, clean design, and smooth navigation between screens such as Login, Dashboard, Opportunity Details, and Bookmarks.

OBJECTIVE

- To understand the RAD model phases
- To design UI screens using Axure RP
- To implement navigation using interactions
- To create an interactive prototype without coding

REQUIREMENTS

- Axure RP software

- Computer system
- Basic knowledge of UI design

PROCEDURE

Step 1: Requirements Planning

The main features of the application were identified, including login, dashboard, opportunity browsing, bookmarking, and navigation between screens.

Key features include:

- User Login
- Dashboard with latest opportunities
- Opportunity Details view
- Bookmarking opportunities
- Navigation using bottom menu

Step 2: User Design

The following screens were designed:

- Login Screen
- Dashboard Screen
- Opportunity Details Screen
- Bookmarks Screen

Opportunity

Product Design Internship

DesignFellowshipRemote

DEADLINE

Nov 15, 2024

DURATION

6 Months

About the Program

This fellowship is designed for emerging designers looking to bridge the gap between academic learning and professional practice. Participants will work on real-world projects with industry mentors.

Eligibility

Currently enrolled in or a recent graduate of a design-related program.

Strong portfolio demonstrating problem-solving skills.

Step 3: Construction

Interactions were added using Axure RP:

- “Sign in” button → navigates to Dashboard
- Opportunity cards → navigate to Opportunity Details page
- Bookmark icon → navigates to Bookmarks page
- Back button → navigates to previous screen

The prototype was tested using the preview option, and necessary improvements were made to ensure smooth navigation and user experience.

Step 4: Cutover

The final UI prototype was completed and verified. The application demonstrates proper navigation and user interaction. The prototype is ready for demonstration and can be exported for further development if required.

RESULT

The Campus Connect UI prototype was successfully developed with multiple screens and interactive navigation. The application demonstrates a smooth user flow from login to browsing opportunities, viewing details, and bookmarking. The use of Axure RP enabled the creation of an interactive prototype without coding, effectively showcasing the application's functionality using the RAD model.

CONCLUSION

This experiment helped in understanding the RAD model and its application in UI design. Using Axure RP, an interactive prototype was created efficiently with proper navigation and user flow. The process improved understanding of UI/UX design, interaction design, and rapid prototyping techniques.
